

## Asylum and immigration

The subject concerns knowledge, sustainability and integration.

Italy is the 4th or the 5th European country for immigration, therefore it is wrong to tell the Italians about the danger of the number of immigrants.

Immigration is a resource for the development of Italy and a need for Europe.

The state must know how to manage the boundaries with standards of quality; but the solution must be taken together, so we need the EU to work together .

By 2060 the birthrate will be equal to zero! if we don't accept immigrants within our borders.
